

1. Identification of the subject of the study	
2. Identification of the objectives of the study	
3. Identification of the variables of the study	
4. Identification of the methods of the study	
5. Identification of the results of the study	
6. Identification of the conclusions of the study	
7. Identification of the limitations of the study	
8. Identification of the contributions of the study	
9. Identification of the implications of the study	
10. Identification of the future research directions
